Project Title	Online course management system
Week	Week 1

1.Introduction

The Online Course Management System (OCMS) is a web-based application that allows educational institutions and training organizations to manage online courses, student enrolments, instructors, and learning materials. The system provides a centralized database for efficient course administration and student learning.

1.1 Purpose

The purpose of this document is to define the business, functional, and non-functional requirements of the Online Course Management System. It also describes the Student Database Module, which stores and manages student information.

1.2 Project Scope

The system manages member registration, membership plans, trainer assignments, attendance tracking, payment records, and report generation. It helps gym administrators reduce manual work and improve data accuracy

1.3 Intended Users

- Students
- Instructors
- Administrators
- Training Institutes and Educational Organizations

2. Business Requirements

The following are the key business needs the system must satisfy:

- Maintain student and instructor records.
- Manage online course creation and enrollment.
- Store learning materials and assignments.
- Track student progress and course completion.
- Generate reports on enrollments and performance.
- Ensure secure access to user information.

3. Functional Requirements

Functional requirements describe what the system must do.

ID	Requirement Description
FR-1	The system shall allow students to register and log in securely.
FR-2	The system shall allow instructors to create and manage courses.
FR-3	The system shall allow students to enroll in available courses.
FR-4	The system shall allow instructors to upload study materials and assignments.
FR-5	The system shall allow students to submit assignments online.
FR-6	The system shall display grades and course completion status.
FR-7	The system shall generate reports for students, instructors, and administrators.
FR-8	The system shall allow administrators to manage users and courses.

4. Non-Functional Requirements

- **Performance:** The system should respond within 2 seconds.
- **Security:** User accounts and academic data must be protected.
- **Reliability:** The system should be available with minimal downtime.
- **Usability:** The interface should be simple and easy to navigate.
- **Scalability:** The system should support thousands of users and courses.

5. Customer Database Module – Data Requirements

Since this week's focus includes the Customer Database Module, the following entity and attributes have been identified:

Attribute	Data Type	Description
student_id	INT (Primary Key)	Unique student ID
full_name	VARCHAR(100)	Student name
email	VARCHAR(100)	Email address
phone_number	VARCHAR(15)	Contact number
enrolled_course	VARCHAR(100)	Course enrolled
enrollment_date	VARCHAR(255)	Date of enrollment
progress	VARCHAR(20)	Course progress
completion_status	VARCHAR(20)	Completed/In Progress

6. Assumptions and Constraints

- Users must register before accessing the system.
- Internet connectivity is required.
- The system uses a relational database (MySQL/PostgreSQL).
- Only authorized users can access and modify records.

7. Conclusion

The Online Course Management System provides a centralized platform for managing online education. The Student Database Module ensures accurate storage of student information, course enrollments, and learning progress, forming the foundation for the complete database design and implementation.
